Data Volley 4

To satisfy all your needs for scout and video analysis

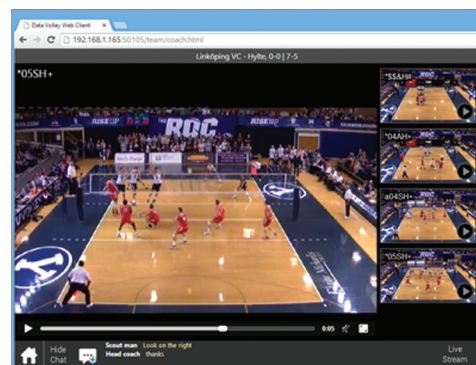

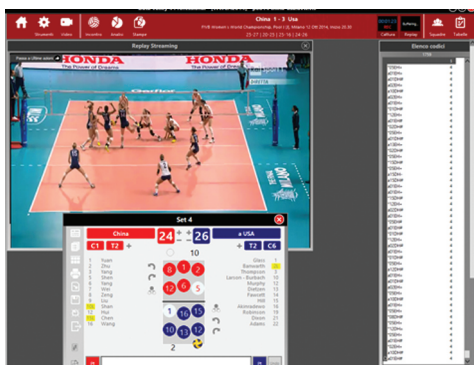

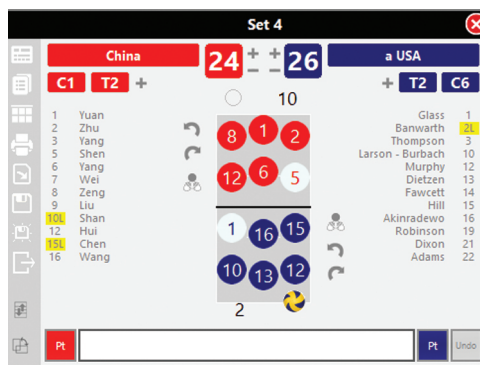

Data Volley 4 is the scout software that you can customize based on your need and ability: you can focus on few key data, or you can scout all the skills, to analyze every possible perspective of the game.

Data Volley 4 is:

Complete - Because now video analysis is integrated. In addition to the scout, you also have the video analysis, in order not to miss a single detail of the game and to link to the statistics a visual feedback.

Customizable - Custom data analysis as needed. The data processing possibilities are endless and it's possible to differentiate the analysis by recipient, inserting in the study only the required items.

Essential - During training where the collected data may be used to study athletes' efficiency and their evolution over time, in order to prepare exercises aimed at improving performance.

- **Scout in real time:** Watch the rally and type the codes on the keyboard. Data Volley 4 allows you to keep track of both teams and every contact in real time during a point.

- **Scouting from video:** You are able to watch the previous point on-demand by using the video streaming option. This function allows you to receive the streaming information from another computer connected on a local network or you can connect the video camera directly to your computer.

- **Modify the codes:** You are able to edit your scouted data from a match anytime you want; by double-clicking on a code in the code list, the program allows you to modify your code. It opens a window, which will allow you to make corrections and add advanced information such as the zones, setter calls, attack combinations, etc.

- **Basic analysis:** For the beginner, even when scouting only the basic codes, you are able to record the information needed to access detailed analysis of those skills

organized by player and rotation.

- **Directions analysis:** To understanding the directions of the ball, scout directions. By entering the starting or landing zone of the ball while coding. By drawing the trajectory of the ball directly on the court.

- **Zone analysis:** Evaluate the scouted skills according to the zone where they are performed; allowing you to understand where you can have the best results. You can customize the type of data displayed according to your specific needs.

- **Effects analysis:** You can view the results of the most recent contacts, organized by player and skill. Allowing you to track each player's performance trends for each skill.

- **Share:** Watch the video streaming and the replay of last 5 points. Save and watch later the most important clips. Share useful info for the game's strategy with coaches, statistics with journalist and TV.

- **Streaming video:** Creating the local network also allows you to send the video of the match directly to the bench; enabling you to review the last rally or the previous

four actions.

- **Video analysis:** Data Volley 4 has fully integrated all the features of Data Video. You no longer need to have separate programs for scouting and data analysis and another that captures and synchronizes video.
