Data VideoEss

## VIDEO ANALYSIS IN JUST FEW CLICK

Data VideoEss

Analyze your team and study your opponent

Data Video Essential is the video analysis software that in few clicks allows you to watch the match's actions and analyze and study your own team and the opponent and make the necessary corrections both during the match and training.

The "3 steps" of Data Video Essential:

Capture or Import - Connect the videocamera to your PC and capture the match in real time, or import the video later.

Synchronize and Scout - Set the server and setter's position on the court and then with just a few clicks each rally, organize the match. You can also import the scout and synchronize it automatically with the video of the match.

Analysis and Editing - Analyze rotations or watch the video by clicking on any skill you want to analyze. Edit the video and watch it wherever you want: on PC, television, projector etc...

- Minimum requirements: Any computer, videocamera or capture card and you are ready to start your first video analysis.

- Easiness of use: The wizard allows you to take advantage of the software's potenzial from the very first use.

- Capture and Import: Connect the videocamera to the computer with any capture card and shoot in real time. You can also import the video later. The software convert/compress it automatically and make it instantly available.

- Synchronization: Import a scout file from Click&Scout or Data Volley, align it with the first rally of the video. The process is quick allowing you to cynchronize the video in only few seconds.

- Scout: If you don't own a scouting software, you can set the serving team, set the setters' positions on the court and then by clicking just three buttons you can get rotation analysis for both teams.

- Video Analysis: You can watch the rallies of each rotation as many times as you want. By importing the scout file you are able to analyze the video when clicking on any skill.

- Frame Editor: Capture the highlights of the game and edit the image by adding lines and text. You can save the images on your computer for later use.

- Video Editing: Create a customized video to show to your athletes. Choose the actions to add in your analysis, decide which and how many analysis and add slow motion. Create your own archive by saving the videos on USB device or on DVD.

- Streaming video: Replay the action just completed on your computer from the bench, in order to quickly adapt your game strategy thanks to the streaming delay.

Use the streaming video also during training: set the delay according to your needs and show your athletes the movement he just made.

You can also play the streaming on some screen or external monitor, usefull to get an immediate feedback.
